

Get a grip.

Every situation is different, and we provide you with the tools to overcome any challenge you may encounter in the field. The new wheelsets from IBAK add functionality and versatility to any of our tractor systems.

The Treaded Profile wheels provide great performance when crawling over pipe joints or debris and are available in a soft black compound or in a harder brown polyethylene resin. These wheelsets feature IBAK's new wheel and hub system which reduces your wear item cost. When a set of tires is worn from use, simply remove them from the hub and replace them, saving you the expense of an entire new set of wheels.

We have treaded tires as well as granulated wheelsets and high traction wheels for nearly any application. Contact us or your regional RapidView representative to order a set today!

Treaded Profile Wheels - Available in Black/Soft or Brown/Hard

Choose your weapons...

Standard Wheels

IBAK's standard tire is a rubber compound that contours to the pipe wall and provides excellent traction in a variety of pipeline conditions. These wheels come standard with every tractor system.

Treaded Profile Wheels

Treaded wheels provide greater performance when climbing over pipe joints or hard debris. The grooved design grabs the surface and pulls the tractor over the obstruction.

Granulated Wheels

Granulated wheels use special granulated rubber compounds which are fused together to form the wheel. These wheels provide excellent performance in PVC or relined pipelines.
